DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

2. Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding to claimed language such as claim 1, "transmit an ultrasonic wave in accordance with a plurality of transmission modes different in transmission timing from each other" is indefinite for failing to point out and distinctly claim the subject matter. The phrase "modes different in transmission timing from each other" is not clear.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Nabity et al (US 5,557,536).

Regarding to claimed invention as best understood, Nabity et al teaches ultrasonic velocity measurement system for measuring flow rate of fluid comprising ultrasonic

transmission section for transmitting signal into fluid, and ultrasonic receiver for receiving reflected ultrasonic signal, see at least abstract. Nabity also includes transmission timing control section such as time-control and computation system 48 to control the synchronization of the entire flow meter, see col. 6, lines 31-40 and lines 51-65. On col. 7, lines 5-11, Nabity discloses the calculating of flow of fluid in flow stream from the time control and computation system.
